# ? Question:

- In INTECRIO the **Workspace Browser** provides a tree view of the project in the current workspace

- There is:
    - Hardware
    - Software
    - Environment
    - Systems

- For what is the **Environment**?

- What is the difference between **Software** and **Environment**?

💡 Answer:

- Environment systems are used to model a plant for virtual prototyping
    - During PC simulation the **Environment** simulates the real world
    - In a later development step - after virtual prototyping - the **Environment** is removed and the controller software is connected to real sensors, for example to the signal ports of the **ES910**
