

ISOLAR-A - DBC Import: java.net.MalformedURLException: unknown protocol: ar

• In ISOLAR-A: When I import a DBC file I receive the following error:

java.net.MalformedURLException: unknown protocol: ar

• What can I do to resolve this issue?

- There are 2 possible causes for the exception *MalFormedURLException*
- Please find descriptions and solutions for both cases:

Exception due to **Encoding**

- Cause:
 - The DBC Importer supports **ANSI** encoding
 - If there are **special characters** present in the DBC file then the encoding type would be automatically changed by the file system to **UTF-8**
- Solution:
 - \circ $\,$ For this to be recognized by the DBC importer the encoding should be changed back to $\,$ ANSI $\,$

Exception due to PlatformTypes conflict

• Cause: When there are more than one user PlatformTypes file present then an exception is thrown while resolving the conflicts

- Solution: This is fixed since ISOLAR-A V10.0
- Work around for earlier versions:
- 1. Remove all PlatformTypes file from the project before DBC import
- 2. Perform the DBC Import
- 3. Place back the PlatformTypes file inside the project after the DBC import
