

# RTA-OS

## Infineon TriCore with the GHS Compiler

### Features at a Glance

AUTOSAR R4.3 compliant  
Multicore OS

Supports all scalability  
classes

MISRA-C:2012 compliant

RTOS overhead:  
70 bytes RAM  
0 bytes ROM

Category 2 ISR latency:  
92 CPU cycles

### RTA-OS

RTA-OS is the new generation operating system from ETAS that conforms to the AUTOSAR OS specification and builds on the benefits of the successful RTA-OSEK product. It provides a toolsuite that includes a PC-based graphical configuration tool and adaptive OS generation capabilities to deliver flexible, fast solutions for a wide range of automotive microcontrollers.

The graphical configuration tool allows all OS objects to be configured, and creates AUTOSAR conformant XML files describing the OS configuration. In addition, it provides automatic verification against the AUTOSAR XML schema and allows users to create projects for easy management of multiple files.

RTA-OS improves on RTA-OSEK in several areas, including better runtime performance and smaller memory footprint,

support for multiple processor environments, and automatic support for up to 1024 tasks. The powerful performance analysis tools developed for RTA-OSEK have been updated for RTA-OS to allow hard real-time requirements to be met.

### RTA Product Family

RTA-OS integrates seamlessly with other tools in the RTA product family, including:

- RTA-RTE – a mature, robust production quality AUTOSAR RTE Generator.
- RTA-TRACE – a software logic analyser that allows the runtime behaviour of RTA-OS to be observed.

### Microcontroller Support

RTA-OS supports all variants of the Infineon TriCore family of microcontrollers. Release testing has taken place using the TC275C and TC397 variants.

## Compiler Toolchain

RTA-OS for the Infineon TriCore has been developed with the GHS 2017.1.5 and 2015.1.7 compilers.

Due to the adaptive code generation of RTA-OS, it is possible to use other versions of this compiler to build applications.

## ORTI Debugger Support

RTA-OS can generate OSEK Runtime Interface information for the Lauterbach TRACE32 debugger.

## Interrupt Model

RTA-OS supports up to 256 nested interrupt priority levels on the Infineon TriCore.

## Memory Model

RTA-OS supports the large, small, small-const and small-data memory models provided by the GHS compiler.

## Maximum Number of OS Objects Allowed by RTA-OS

	BCC1	BCC2	ECC1	ECC2
Max. no. of tasks		Up to 1024		
Max. tasks per priority		Up to 1024		
Max. queued activations	1	$2^{32}-1$	1	$2^{32}-1$
Max. events per task	n/a	n/a	32	32
Max. alarms		$2^{32}-1$		
Max. software counters		$2^{32}-1$		
Max. hardware counters		$2^{32}-1$		
Max. nested resources		$2^{32}-1$		
Max. standard resources		$2^{32}-1$		
Max. internal resources	Not limited by RTA-OS			
Max. application modes		$2^{32}-1$		
Max. schedule tables		$2^{32}-1$		
Max. expiry points per schedule table		$2^{32}-1$		

## Memory Overhead of RTA-OS

Memory Type	Overhead (bytes)
RAM	70
ROM/Flash	0

In addition to the OS overhead, each object used by an application has the following memory requirements:

Object	RAM (bytes)	ROM (bytes)
Task	0	20
Category 2 ISR	0	8
Resource	4	8
Alarm	12	2
Counter	4	20
Schedule Table	12	16
Expiry Point	0	4

## Performance

The following table gives the key RTA-OS kernel performance data measured in CPU cycles. All measurements were taken on a Infineon TriCore TC275 C-step with an 80MHz clock speed.

Task Type	Execution Time	Ref.
Pre-emption	244	A
Normal Termination	122	B
Task Switch	162	C
ChainTask	294	D
WaitEvent	1182	E
SetEvent	1446	F
Schedule	232	G
ReleaseResource	212	H
Category 2 ISR Entry Latency	92	I
Category 2 ISR Exit Latency resuming interrupted task	94	J
Category 2 ISR Exit Latency with task switch	206	K
Category 1 ISR Latency	24	L

The following figures illustrate how the RTA-OS kernel overheads are allocated during the operations given in the above table:

Figure 1 - Task1 is preempted by Task3, followed by a task switch and then normal termination of Task2

Figure 2 - Task2 chains Task1

Figure 3 - Task2 waits for an event set by Task1

Figure 4 - Task1 allows cooperative scheduling by Task2

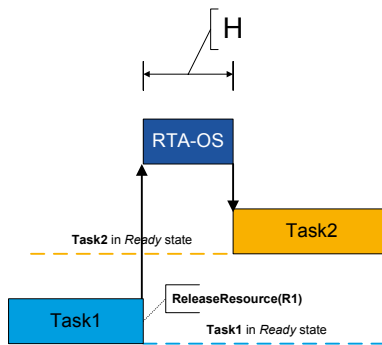

Figure 5 - Task1 releases a resource

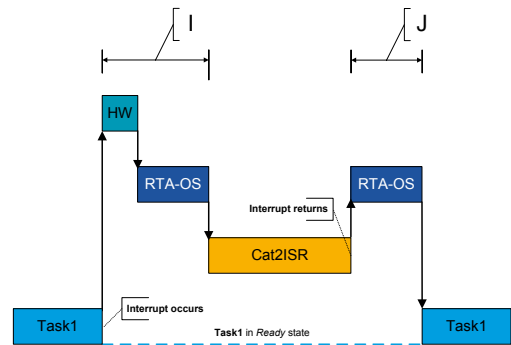

Figure 6 - Category2 ISR entry and exit latency

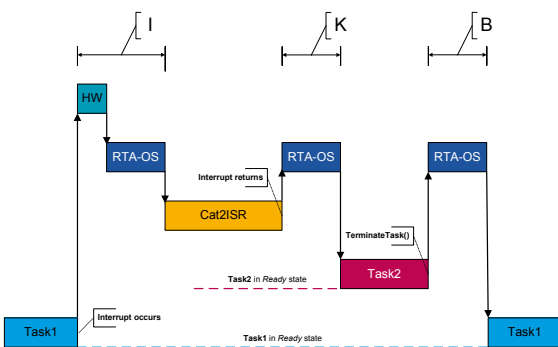

Figure 7 - Category2 ISR switches to Task2

Figure 8 - Category1 ISR entry latency

## Order Information

To use RTA-OS it is necessary to purchase a development license for the tools together with an add-on license for the Infineon TriCore port. Machine-named, user-named and floating licenses are available.

To use any operating system code generated by RTA-OS in ECU applications, a valid production license is required. Please contact your local ETAS Sales Office for details of production licenses for RTA-OS.

## RTA-OS Tools Order Information

Item	Characteristics	Object
F 00K 107 119	Machine-named license for RTA-OS for Windows PC	LD_RTА-OS_VRTA_SC34_LIC-MP
F 00K 107 120	User-named license for RTA-OS for Windows PC	LD_RTА-OS_VRTA_SC34_LIC-UP
F 00K 107 121	Floating license for RTA-OS for Windows PC	LD_RTА-OS_VRTA_SC34_LIC-CP
F 00K 107 136	Product CD for RTA-OS	LD_RTА-OS_VRTA_SC34_PROD

## RTA-OS Infineon TriCore Port Order Information

Item	Characteristics	Object
F 00K 110 384	Machine-named license for RTA-OS for Infineon TriCore Scalability Classes 1 & 2	ES_RTА-OS_TRIGHS_SC12_LIC-MP
F 00K 110 385	User-named license for RTA-OS for Infineon TriCore Scalability Classes 1 & 2	ES_RTА-OS_TRIGHS_SC12_LIC-UP
F 00K 110 386	Floating license for RTA-OS for Infineon TriCore Scalability Classes 1 & 2	ES_RTА-OS_TRIGHS_SC12_LIC-CP
F 00K 110 391	Machine-named license for RTA-OS for Infineon TriCore Scalability Classes 1 to 4	ES_RTА-OS_TRIGHS_SC34_LIC-MP
F 00K 110 392	User-named license for RTA-OS for Infineon TriCore Scalability Classes 1 to 4	ES_RTА-OS_TRIGHS_SC34_LIC-UP
F 00K 110 393	Floating license for RTA-OS for Infineon TriCore Scalability Classes 1 to 4	ES_RTА-OS_TRIGHS_SC34_LIC-CP
F 00K 110 387	Product CD for RTA-OS for Infineon TriCore	ES_RTА-OS_TRIGHS_PROD
